

linealignmentstyle — Choices for whether outlines are inside, outside, or centered

[Description](#) [Syntax](#) [Also see](#)

Description

The look of a border or outline for markers, fill areas, bars, and boxes is determined by its pattern, thickness, alignment, and color. *linealignmentstyle* specifies the alignment.

linealignmentstyle is specified via options named

`<object><1 or li or line>align()`

or just

`<1 or li or line>align()`

For instance, for the bars used by `graph twoway histogram`, the option is named `lalign()`:

```
. twoway histogram ... , lalign(linealignmentstyle) ...
```

Syntax

<i>linealignmentstyle</i>	Description
<code>inside</code>	line is inside the outline
<code>outside</code>	line is outside the outline
<code>center</code>	line is centered on the outline

Other *linealignmentstyles* may be available; type

```
. graph query linealignmentstyle
```

to obtain the full list installed on your computer.
